

Total Recall VR LinX Virtualis

Virtual Machine Voice Recording Solution

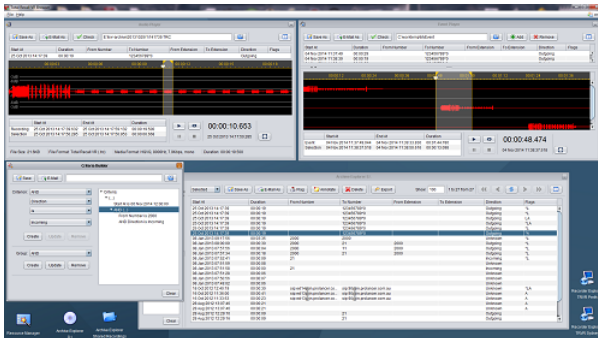

Total Recall VR LinX **Virtualis** is a powerful voice logging & call recording application that can be run as a virtual guest on top of a virtualisation product such as Oracle's VirtualBox or VMware Workstation.

Record up to 120 simultaneous channels (depending on available CPU and RAM resources):

- SIP Sessions
- SIPREC
- RTP Streams (Unicast, Multicast, Broadcast)
- DMR Radio Recording (Tait VRP, Hytera HDAP)

Manage your virtual machine recording solution via Total Recall VR Desktop PC software:

- Comprehensive system configuration, monitoring and management tools.
- Multi-channel automated call monitoring with visual waveform
- Multi-channel call playback & event reconstruction with visual waveform
- Powerful call search tools
- Easy to use call playback tools with visual waveform

Included Applications:

Recorder Control Panel

Advanced remote configuration of Total Recall VR systems & comprehensive maintenance options.

Recorder Status Panel

Easy, real-time visual indications of recorder status, disk space and recording channel status.

Resource Manager

One-stop shop for adding user accounts, connecting TRVR Units, Network Archives, Mega Archives, Public Folders & more.

Criteria Builder

Create, edit and share natural language search queries, to find calls on TRVR systems and archives. Share pre-defined searches between users & applications.

Recorder Monitor

Multi-Channel call monitoring over multiple TRVR units with visual waveforms.

Event Player

Multi-channel event reconstruction with visual waveforms. Replay & save combined audio.

Archive Explorers

View, search, export and manage recordings on TRVR systems, disk archives, network shares, USB archives & more.

Audio Player

Replay TRVR recordings with visual waveform. Built-in email sharing and call integrity checker.
